Contents The MCQ examination is a comprehensive examination of medical knowledge and practice. The AMC recommends that candidates undertake a thorough review of the major topics covered in the examination. Candidates should familiarise themselves with the MCQ format. A wide range of general texts is readily available on this form of examination and its associated techniques. While candidates may find it useful to review the major textbooks in the key clinical disciplines, the questions in the MCQ examination are oriented towards the more common clinical applications, differential diagnosis and therapeutics, and candidates should take care when using major reference type textbooks. The AMC has drawn up a guide to some useful texts. These textbooks, listed below, will provide background reading on key topics and contain a great deal of reference material. They are not intended as prescribed reading. Candidates may find it more useful to review medical journals that contain useful review articles and summaries of the identification, treatment and management of the more common clinical conditions in the Australian community. Anthology of Medical Conditions The AMC publication Anthology of Medical Conditions has been produced not only to assist international medical graduates (IMGs) to prepare for the AMC examinations but also as an essential tool for clinical practice. The publication lists over 130 clinical presentations of clinical conditions and classifies them to assist in a problem-solving approach to diagnosis and management. It is essential for all doctors to be familiar with the laws of the society in which they practise medicine and the ethics that underpin medical practice. It is also important to understand the organisational aspects of medicine in the Australian context. The Anthology of Medical Conditions contains a separate section dealing with these important issues, entitled Legal, Ethical and Organisational Aspects of the Practice of Medicine (LEO). The publication is enhanced throughout with medical illustrations. The publication is recommended for use in preparing for the AMC Multiple Choice Question (MCQ) and Clinical Examinations. Purchase the Anthology of Medical Conditions Good Medical Practice The AMC Good Medical Practice – Professionalism, Ethics and Law is an ideal core textbook for international medical graduates (IMGs), medical students and doctors in training. The publication is recommended reading for IMGs undertaking the AMC examination process. It will also serve as a reference book for doctors in independent clinical practice and as a guide to medical regulators and lawyers, doctors, and community members who serve on performance and conduct panels and tribunals. Purchase the Good Medical Practice AMC Clinical Examination For the AMC Clinical Examination, the AMC recommends that candidates undertake a comprehensive review of clinical skills and differential diagnosis. Experience suggests that a review of journals that contain articles dealing with common clinical conditions in the Australian community will be more effective in preparing for the clinical examinations than spending too much time with reference books. A list of useful journals is provided below. Other suggested text books There are many medical textbooks available and most of them are of high standard. They range from quite short texts, which cover essential knowledge, to long and comprehensive treatises which most people use as reference books. The AMC has drawn up the following list as a guide to some useful texts. They are not intended as prescribed reading. AMC Examinations are set on the latest editions of the recommended textbooks. It is up to the AMC candidate to obtain the latest information. Material contained in previous editions of the recommended textbooks, or other unspecified textbooks, may not be correct and will not be used to determine the result of AMC Examinations.
